

Dmitry Beskov

Frontend Developer

Sofia, Bulgaria | dmitry.beskov@outlook.com | besdar.github.io

Work experience

RingCentral (UCaaS) | 2022 - present

Senior Software Developer

- Delivered 700+ merge requests across RingCentral engineering repositories, including 470+ in the project.
- Introduced an AI review process, authored the project's initial AI guidelines, and integrated a repository-wide tool that centralizes AI guidelines enabling developers to generate the respective documentation for any AI agent (e.g., Codex, Claude, Copilot, Gemini) with a single command.
- Reduced SonarQube code smells by about 30% and removed all tracked SonarQube bugs during a project's cleanup.
- Integrated dead-code and static-analysis checks into the code-review process, removing 4,000+ unused lines and catching unused React props, localization keys, and test IDs earlier.
- Strengthened delivery quality through 400+ reviewed code changes and 2,300+ review comments, focused on core billing and purchase flows.

In this role I lead the front-end development of RingCentral's high-risk billing and purchase platform, delivering and maintaining dozens of customer-facing and internal administration sub-modules while ensuring release safety, data integrity, and an optimal user experience.

Stack: TypeScript, React, Micro Frontends, Jest&RTL, GraphQL, Node.js, GitLab CI/CD, SonarQube, ESLint, Chrome extension

Foxford (EdTech) | 2021 - 2022

Frontend developer

- Started a code review process for the team, was an organizer of weekly frontend meetings
- Proposed many new rules to the ESLint to make it stricter in the project, integrated Stylelint, created code style guides for the team. As a result, the development process became faster and our product became more stable
- Enhanced the Rollup building script and configuration to deliver less data to our customers: implemented code splitting for production builds, CSS modules support, source maps and much more
- Improved our Lighthouse performance and SEO metrics by 30%, and started an epic task of moving from a 3rd party website builder to React template based development

Practically was a team leader (4 developers), worked a lot with HTML&CSS and performed managerial activities like teamwork process optimization on various development stages

Stack: JS&Flow, JQuery, HTML&CSS, React&Effector, NodeJS

Adsterra (AdTech) | 2020 - 2021

Frontend developer

- Was noticed as one of the fastest employees in our department
- Offered JS linter and Stylelint improvements and integration techniques, minification of JS and CSS; took active part in writing our frontend style guide; played a significant role in the refactoring process of our legacy code to modern syntax
- Successfully and confidently worked with PHP and PostgreSQL backends when the company was understaffed and needed a backend boost
- Was praised for being self-sufficient during the onboarding process

My main areas of work included the development of the advertising JS scripts, internal admin tools and the company's client account pages. Formerly I was employed at another company, but I worked on Adsterra's projects

Stack: JS, JQuery, HTML&CSS, PHP, PostgreSQL, React&Redux, Vue

Education

Saint Petersburg State Electrotechnical University | 2014 - 2018

Communication Technologies and Communication Systems

Faculty of Radio Engineering and Telecommunications

- I once created a presentation about video codecs for a seminar and got an A+ not only for my homework but for the whole semester
- At the end of my studies, I gave all my materials for the four years to all the first-year students and got a lot of positive feedback from them

Stack: HTTP, OSI Model, C++, Git
